

Craftsman™

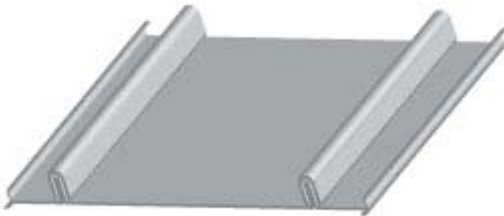

The Craftsman™ Series is a snap-on batten roof system, available in narrow, wide (WB), and high (HB). The pan and batten are manufactured separately to maximize design flexibility under various weather change conditions.

The Craftsman™ Series is a water-shedding system and can be used for roofs with a substructure with a minimum roof slope of 3:12. The Craftsman™ Series design eliminates the necessity of flashings. Slope changes from roof to fascia to soffit can be made without the need for a separate fascia board. The system locks the batten to the panel while allowing for expansion and contraction.
