

Series 1000

Floating Clip Design

TEFLON® is a registered trademark of DuPont™ used under license by Nu-Ray Metal Products, Inc.

Nu-Ray's **Series 1000** is a concealed clip system panel. With the use of clips, this panel is designed to allow for expansion and contraction on most roof and wall applications. For ventilation, the unique clip design provides $\frac{1}{8}$ " clearance between the flat surface of the substrate and the panel.

Series 1000 is available in panel widths of 12, 16 and 20 inches.

UL-90 ratings allow it to be used on both commercial and residential applications.

NRM offers a full palette of cool color options featuring either top-of-the-line 26 gauge **Nu-Shield™ with Teflon® surface protector** or 24 gauge **PPG ULTRA-Cool™ Kynar 500®** paint finishes.

Zincalume Plus is available in 26 and 24 gauge; in .032 or .040 aluminum; and in 16 oz. or 20 oz. copper.

G-90 level galvanized base metal is standard in 26 and 24 gauge materials.

22 gauge material is also available upon request.

Panels are available with pencil ribs (shown above), striations, or with a flat pan. Pencil lines or striations are recommended.

Minimum $\frac{3}{12}$ pitch is recommended. Recommended clip spacing is 18" on center.
